

# Autobag®

BRAND AUTOMATED SYSTEMS

## SidePouch

Autobag® brand pre-made SidePouch bags are available in a wide range of film types. With a variety of unique material solutions, you can select the best option for your custom packaging applications. Available in plain and printed formats.

## BENEFITS

### Operational Efficiency

- Optimizes your manufacturing capabilities
- Reduces amount of manual labor in packing operation
- Multiple bags open at one time

### Product Integrity

- Available in a wide range of barrier and gauge properties to help protect and extend product life
- Effectively seals through a wide range of product contamination
- Excellent product integrity through distribution cycles
- Tamper evident packaging
- Available with easier to open features - Eliminates need for knives or scissors to open the package, reducing risk of injury
- Available with recloseable options that make for easy reusability

### Brand Experience

- Improved shelf appeal
- Easy open and recloseable feature available for added consumer convenience
- Delivers consistent performance to drive brand loyalty and sales
- Increase visual appeal with clarity and durability

## CHALLENGE

Now more than ever, your operational performance is everything, it's what makes or breaks your bottom line. The key however, is to provide a solution that not only improves your operational efficiencies but also meets the growing needs of your customers.

## SOLUTION

Our Autobag® brand pre-made SidePouch bags are available in a wide range of gauges and material configurations in plain and printed formats to fit your unique packaging needs. When paired with the FAS SPrint Revolution SidePouch system, this total solution offers improved speed, versatility, and productivity often while also reducing labor. This innovative solution offering can improve your operations by helping you transition from a manual to a more automated process.

SidePouch bags are also available with consumer convenience and performance features such as easy to open features, recloseable zippers, ventilation, and sustainable options.

\*RIC: Stands for Resin Identification Code. RIC 4 represents LDPE which is Low-density polyethylene

\*\*Recycling available via store drop-off locations. Check website for locations near you.

\*\*\* This structure has been prequalified for a Store Drop-off (and Widely Recyclable in Canada) label with How2Recycle. The recyclability of this package can change due to product application, attachments, and other factors. Typically packaging that comes in contact with wet, sticky, or greasy materials (wet wipes, oil on metal parts, slime/putty in toy applications) will not be acceptable for recycling. Customer needs to be a H2R member to use the label with branded artwork.
